

The Nursery Group – Member Profile

Ecosystem Management Services

EMS is a division of Workpower Incorporated (WA's second largest business service) and was established in 1992 as a specialist wetland nursery. The business has expanded since to include the wholesale production of wetland and dryland WA native plants, landscape plant stock and EMS is now one of only two licensed WA growers of the OzBreed range of drought tolerant strappy leaf plants.

The organisation employs 25 supported employees and 11 specialist staff. The employees are engaged in nursery work and grounds maintenance. The employees undertake all activities in these areas.

EMS is still WA's largest supplier of wetland plant stock despite those lines now only representing around 25% of our income. EMS Plant Production is accredited with the Garden Industry Association, and our environmental services division is a voting member of the WA Revegetation Association.
